

Game Server and Program

ABSTRACT

By diversifying a variation of so-called difference
5 detection game, a player can enjoy the difference detection
game without being tired of it. The difference detection game
is played on a display of a terminal device connected to a server
via a communication line. When the player sends a correct answer
in the difference detection game, a point may be provided to
10 the player. In addition, a reference image for reference and
a difference image may be switched and alternatively displayed
on the display of the terminal device. In addition, the
reference image and the difference image may be simultaneously
displayed. The difference detection game may be played with
15 animated images. In addition, a difference screen may be
created from a replay screen of a different game such that the
player may play the difference detection game after the different
game.
